

Harvard Receives Another GREEN BUILDING Award

Harvard Communities was named GREEN BUILDER OF THE YEAR by the Homebuilder's Association of Metro Denver, (HBA). The announcement was made at the HBA annual installation and awards event, on December 3. This award is one of the HBA's most coveted awards.

“We have worked very hard over the last several years to make our homes as green and energy efficient as possible,” stated John Keith, President of Harvard Communities. “Our homes are among the most energy efficient new homes being built anywhere in the country today, and we are so pleased to be honored by our peers at the HBA for these efforts,” Keith continued.

Harvard has been recognized nationally as one of the leading builders of ultra energy efficient and green homes. Energy Star recently named Harvard the recipient of their annual “Leadership in Housing Award.” Harvard works closely with Energy Star, The Department of Energy's “Building American” program and the National Renewable Energy Lab, (NREL) on the design and specifications for their energy efficient homes.

In addition to achievements in energy efficiency and renewable energy, Harvard also is building homes that are certified in the LEED-H program, one of the country's leading green building certification programs.
